

How I work *with AI* today

Five layers that take an idea from first spark to safe delivery.

01 Capture every idea

Laptop Phone Watch

IDEATE

Ideas come at any moment. I capture them on my laptop, phone or watch, with no friction.

02 Portfolio governance

Projects Ideas Priorities

GOVERN

One list of all my projects and ideas. I prioritise, so I work on the right things at the right time.

03 The architect studio

70% voice 30% keyboard

CREATE

I act as the architect. Each machine runs its own projects, and I direct them: what to build, how to build it, what to fix and what comes next.

Most of this I do by talking to my AI, not typing.

04 Delivery governance

Data artefacts Code Decisions Priorities

CONTROL

Checks that each project delivers the right results, and feeds back to the portfolio to prevent conflicts.

05 The repository

Audits Quality assurance Security

SECURE

All data and code live on my drives and GitHub. Constant audits, QA and security checks keep it safe.
